Lower Burma

entirely dispensed with. If the parents of both houses are agreeable, the contracting parties get married with most ardent lover-like rapidity. The age, too, has become very much younger. Most lads get married when they are eighteen or nineteen; thirteen or fourteen is a common age for the girls. Runaway marriages are common enough, and though the parents may be angry, they are usually too easy-going and indolent to take any energetic action in the matter, and let the couple find out their mistake and come and ask for pardon and a house to live in, which is seldom refused. Occasionally in Lower Burma a stern father demands that they shall be separated until the lad has got a situation for himself, but this is ordinarily little more than a mere form of speech. In Upper Burma, where food is scarce and working hands more valuable, the husband is brought to the girl's parents' house and made to do his share towards supporting the household.

The preliminary courting is naturally conducted in the old fashion, best known to those who have had experience of their own in such matters. The parties meet at pwès, the girl perhaps selling cheroots, fried garlic, le'pet, and what not, and therefore being readily accessible to any swain. It must not be supposed that keeping a stall is regarded as anything derogatory. Numbers of perfectly well-to-do women set them up regularly; some even have daily work in the bazaars, and very often a girl commences occupations of the kind with the view of attracting the young men and securing a husband. Then there are meetings at pagoda feasts, in the zayats and at friends' houses, so that there are plenty of chances of introduction to eligible swains, even without calling in the assistance of the aungthwè. This functionary makes it a regular occupation to know all the attractions, physical and sordid, of all the young women in the place, and for a small consideration, or sometimes merely for love of his trade, brings young couples together and arranges places of meeting for them. He is, of course, most useful where an impecunious youth aspires to the hand of a rich merchant's or high official's daughter. He manages an introduction in a roundabout way to avoid rousing suspicions, praises his client's appearance and

Burmese AP4

footpaths, and with a huge green cheroot in his mouth, leisurely contemplates the operation. Everything is now in the hands of nature, and the agriculturist may lounge round his farm in peace till November; unless, indeed, excessive rain floods the ground and rots the crop, when a new planting out has to be gone through. The harvesting near Rangoon is entirely done by men from Upper Burma, or even by Indian coolies. They work for very little, and it saves the farmer a good deal of time and dignity to get all the cutting done for him. Accordingly, from October till December the steamers down the Irrawaddy used to be crowded with King Thibaw's subjects, all of whom had to leave behind them with their Myo-sa, or his delegate the Myo-wun, who vicariously "ate" the township between them, a pledge either of property or of some member of their family, that they would return to their country again. When they got back, very little of their hard-earned gains escaped the voracity of the royal officials. Now they come down by train, and after a trip or two learn enough to keep their money from enterprising fellow-countrymen. These anyathas, as they are called, behave remarkably well in British territory, notwithstanding the assertions of the rural police, who, being unable to detect dacoits, declare that these are all Upper Burmans who have come down for the harvest. They are really, however, mostly simple, quiet people, who are kept very much in awe by the bluster and town-knowledge of the down-country farmers, and work away zealously with their queer sickles, looking like the ordinary English article worn to half its original size by long use. It is worthy of notice that the grain is not mown close to the ground as in Europe. Except where there is a market for straw, very little more than the ears are cut off, and the straw burnt in the hot weather of March and April supplies a scarcely-needed fertilising to the soil. The reapers usually receive their payment from the farmer in grain, but they naturally convert this into money, or more portable goods, before they start off home again.

It does not take long to cut the crop, and then the corn is brought in to the homestead, commonly on rude sledges, more seldom in carts. The threshing-floor does not take

243 led around in circular fashion until the grain is thoroughly separated from the stalks. A pronged hoe is then drawn over the stalks to further the separation, after which the bullocks further stamp upon them. When the grain appears to be full separated from the stalks it is swept up into large heaps, while the stalks are put aside for use as cattle fodder.

Winnowing apparatus consists of a tripod of bamboo poles, from the top of which is suspended a plaited round tray of wide weave. Basketsful of grain are handed up to a man who stands on a platform, often an old barrel or a chair, and empties them on to the tray. As he shakes the tray the grain falls through to the ground, while any chaff is carried away by the wind.

The paddy for household use may then be allowed to dry further before being sent by boat down Pazundaung Creek to be milled. In a few households the paddy for home consumption is husked by a foot-operated pounding device, or by a large, hand-operated mortar and pestle. If there is any surplus, beyond the requirements of home consumption, seed, payment of laborers and debts, it is sold to nearby millers who come to purchase it.

494 3. Bus Operation. Forty-four men of the community are principally occupied as bus drivers or fare-collectors. The latter are known as 'spares' in the local terminology. Because of the total destruction of public transportation facilities during World War II in Rangoon and the surrounding area, large numbers of surplus military vehicles have been converted into buses. These buses are owned individually or by small groups of partners. The Tadagale men who engage in bus operation ply between the village, which is a terminus, and Rangoon. Their vehicles are, for the most part, in poor repair, and breakdowns along the route are not uncommon. No regular time schedule is followed; rather, they begin a trip when fully loaded, which is to say extremely tightly packed with passengers. By carrying maximum loads, and by charging a fare of 6 annas (ca. 8 cents), the bus operators are able to make a profit, despite the high cost of fuel (ca. 47 cents per Imperial gallon) and of repairs.

[436]

• 464 4. Field Labor. Thirty-eight villagers make their livings mainly by field labor. During the planting and harvesting seasons they work steadily for cultivators, either in Tadagale or in nearby communities. They are paid in kind or in cash, seldom in combination. During the growing season, August to November, and again, between the end of the harvest and the beginning of the planting season, these people must depend on other temporary jobs to round out their livings.

234 5. Dairy Farming. This occupation is carried on exclusively by the small
563 group of Indians in Tadagale, who possess herds of water buffalo and cattle.
443 Fresh milk is taken daily by bus, in large metal containers, to Rangoon, where it is sold for cash, mostly to Muslim restaurants. The Burmese inhabitants of Tadagale make but slight use of milk and there is virtually no market for it in the village.

265 6. Selling of Prepared Foods. The preparation and itinerant selling of certain Burmese foods supports twenty persons, of whom many are women. Because of the Burmese habit of informal, occasional eating between the two regular daily meals, food sellers do a considerable business. They are invariably present at the pwes, outdoor dramatic presentations staged during holidays and on other festive occasions.

One of the most popular foods of these vendors is mohingha. Rice noodles are made by pounding rice into a flour, mixing it with water, and grinding into a paste between two flat stone slabs. After the excess water has been expressed from this paste, it is pushed through sieves with narrow holes, to form noodles. Once dried, the noodles are cooked and mixed with a curry to make mohingha. 252

A beverage sold regularly by food vendors is molesaun. It is made of sugar, coconut milk and bits of rice noodles, mixed together. The villagers consider this drink very tasty and refreshing. 272

7. Shopkeeping and Middleman Trading. The typical shop in the village consists of nothing more than a few large glass jars containing cigars, matches, candy, soap, and various other articles, set out on the porch in front of a house. The stocks of these are very small and are periodically replenished by purchase in Rangoon. Customers are occasional and sales are very small. 414

Seventeen villagers devote their main activity to what we have called middleman trading. These persons make a living by periodically buying quantities of such goods as second-hand lumber from dismantled dwellings, bamboo, cloth, etc., and selling them in the village and nearby places.

8. Urban Labor. The nineteen individuals listed in Table II as urban laborers are employed in a government medical warehouse in Rangoon. They are unskilled workers who perform such tasks as moving boxes of medical supplies in and out of the establishment and arranging them in the warehouse. These people commute daily between Tadagale and their place of work by bus. 464 369

These are the numerically most significant of the variety of occupations followed by villagers. There are six unemployed persons and fourteen who are not gainfully employed because of old age, ill health, or blindness. The great majority of the married women and unmarried girls are occupied most of the time with domestic housework, looking after small children, and helping with gardening. 463

The whole character of the occupational pattern is shifting and unstable. Individuals move opportunistically from one form of activity to another as circumstances change, in an effort to round out a living. Informants stated that in former times the community was much more agricultural, but that owing to loss of land through indebtedness people had gradually left farming for other occupations. 463 178

Income

In analysing our data on income, figures for the Indians of Tadagale have been calculated separately. The Indians are occupationally a homogeneous group, all engaged in dairy farming. The range and average of income within this small group is so far above that of the Burmese that a misleading idea of the community's economic structure would be conveyed were the data on the Indians included in a single, overall computation for the village. 434 [563]

The following tables show family incomes.

quality of their sleep suffers to any appreciable extent. Americans who live in Rangoon suffer far more relatively from lack of "beauty rest" mattresses. 511 722 [513]

As far as the actual physical needs of the family go, the refugee camp situation does not seem to be far below an acceptable level. The Pathmo house gave space far above that actually used for physical needs. The answer here would seem to be that social obligations in Pathmo were much greater than here and the actual space fulfilled a real need there. Since such a demand is not present in the refugee camp, the lack of this space is not regarded as a privation. In general the refugee camp quarters are a compressed version of the Pathmo quarters and do not represent any true innovations. The family has been able to contract the quantity and quality of their needs, but their nature has not been appreciably altered. The pattern of "Home" has not been shattered, but has been contracted and its quality somewhat changed. 352 415 [574] 511 178

The town of Pantanaw was recaptured from the insurgents early in the month of December 1950. U Myaing and his family are considering whether or not it would be advisable to return home. It seems that the government has offered to send back those who are willing to return. Government offers them, in addition to passage money, other things such as mosquito netting, or so U Myaing thinks. But they are also hesitant and afraid and would like to remain for some time longer in the peace and security of the refugee camp. However, when the country settles down and things return to normal, they would like to return. They prefer Pantanaw because they find it much easier to earn money there. Here they find it more difficult to find work - and it involves harder labour. Also, the prices here are very high in comparison. 722 669 511 [464] [435]

The daily work schedule of U Myaing while he was working as a fish processor (2 months in a year) was as follows:- 512 461 264

He rose at four or five in the morning said his prayers, drank plain tea, had boiled beans, fried fish and rice left over from the previous day's evening meal. After that he went to collect fish, bring it to the bank and start work on it. He rested from 11 o'clock to 2 o'clock. At two he resumed work till about five when he would be finished for the day. Sometimes he would sleep at the work place after returning home for his evening meal.

Work in the Refugee Camp.

Shortly after arriving at the Camp U Myaing worked in Sulim Park near the Kokine market where a factory for spinning and weaving cloth was being set up. The contractor was Chinese, and he engaged between 30 to 35 labourers every day. These labourers were unskilled and they were employed in levelling the ground and laying the foundation of the factory. Most of the labourers were Indians - there being only two Burmans, U Myaing and Ma Aye Myaing got Rs. 2/-. The working hours stretched from eight in the morning to 12 noon, with a break of one hour at 12. At one o'clock they resumed work and continued until five in the evening. In the mornings they had to go to the factory by themselves, and this took them about a half hour walk. Sometimes they were sent home in a truck in the evenings. U Myaing had to enquire each day at various places for a chance to work. He was not always successful. 722 461 464 331

It was not usual for Ma Aye Myaing to come along like this to work as a labourer. This was the first time she did so. Ma Aye Myaing said that in future she would accompany U Myaing whenever there are prospects of such work. They knew that women worked in this way, but had not known that such work was available. [562]

As a matter of fact, I met U Myaing through the mats which were made in his camp. We got dinner place mats through him. These are rectangular 1½ feet by 2 feet mats of finely-woven split cane in an over 2 - under 2 pattern. They cost Rs. 2/8 each. U Myaing arranged for the making of these mats and collected the money for them, but 285 437

Comparison of Work in Pathwe and Camp

In his role as a refugee U Myaing is reduced from an expanding position as a fisherman in a cooperative enterprise to a transient labourer. He lives for the day of return to his village, and lacks the desire and know-how to adapt to a successful career in his new environment. His pattern of work as a labourer has not been broken he is simply doing a different kind of work. But it is now unskilled and lacks promise of development. Similarly, his wife's role has not appreciably changed: she continues to make mats as in the village in hard times; works as a coolie as a substitute for her contributions in processing fish. The eldest daughter has adapted to an urban trade that of cigar rolling, but is well within the pattern of juvenile work carried on in the village at this time. If the family remained in Rangoon, the children would of course adapt completely to the urban work pattern - but is seems improbable that the parents would.

465
722
369
464

The reduction in income from work can be seen in the following table:

Estimate of Family Average Income per year

Family Work	Income in Pathwe	Camp
Selling Fish Products	1,500	
Mat making	150	600
Cattle Loening	200	
Day Labour		1,032
Miscellaneous (gathering, etc.)	900	
Daughter Ma Yin Shwe		240
Government Help		372
Total	2,750	2,144

The purchasing power of the rupee in Camp is not so to appreciably different from that of Pathwe. The security of Pathwe work was not so much in the surplus which results, but rather in the guaranteed sources of work. Life was easy and a living to be had for the taking. In camp existence is hand to mouth with no real security. U Myaing expresses this when asked about his knowledge of world affairs. "We don't know whether the world situation has improved or not. We get bits of information, but our main worry is work - and how to provide

sufficient food for myself and my family." Yet, it is significant that he[1] manifests no anxiety symptoms, and appears happy and carefree. This suggests that despite the fact that he is presented with insecurity he does not react to it with tensions that have nervous manifestations. The sense of insecurity does not seem to be in his pattern of living, consequently his response is ill-defined.

The points of difference that U Myaing especially emphasized were:-

1. A few weeks of intensive work in Pathwe would get him more than a whole year of salary working in Rangoon.

2. His income in Rangoon is established at a low level. In Pathwe he might make 3 or 4 times his average income from fish products in a good year. On bad years he might just break even. But this did not affect his everyday living quality - since his food was for the most part gathered (fish, fruits etc.) or secured from the cattle loan (baskets of rice).

3. If he was sick in Pathwe his standard of living was not threatened. He made his cash in a short time and had ample leisure for resting. In Rangoon if he does not work he does not eat.

4. In Pathwe he usually had a surplus of 1000 to 1500 rupees on hand during a year. To be lent out (free of interest) to friends and relatives or (usually) invested in fish or family accoutrement. Now he lives from hand to mouth.

5. The loss of comfort and ease is severely felt by the adults. In Rangoon he works to stay alive, in Pathwe, to enjoy a full life.

[1 i.e., U Myaing -- ANALYST]

369 and women too did the same, and wore their HTAMEINS breast high.
291 Here except for the refugees, he does not see much of this except when
562 people are bathing in the public water hydrants. When it is hot the men wear T shirts and the women wear light garments.

369 U Myaing says that the ordinary city dweller cannot do as much
464 hard labour as the average villager. For example, he cannot carry
461 a bag of rice on his shoulders if suddenly called upon to do so.

The workers from Rangoon are much more acute than the workers from the village. They speak and understand English and Hindustani and so get to know of any possible job long before the others. The villagers do not have these advantages, and so have to join work only later and they are placed to work under them.

563 As far as U Myaing is concerned, there is no racial animosity
464 towards Indians and workers of other races. This is due to the fact that there is no racial discrimination on the part of the employers, the first suitable applicant being given the work.

369 He finds that Rangoon has a much more equable climate than
132 Pathwe. In Rangoon it is not as cold as in Pathwe, where in the cold season it was very cold even though they lived in a proper house and kept all the doors and windows shut. He says that they would not be able in Pathwe to live in an open dwelling like they do at present.

369 Their relatives in Rangoon keep to themselves a great deal.
571 They work on their own and earn on their own. In Rangoon each family
602 has only sufficient for itself. We cannot help them financially and neither can they help us much. When we go on a visit they can invite us to join in a meal or to partake of sweet tea, but they would not be able to lend us fifty or a hundred rupees. In Pathwe we could lend each other any amount up till a thousand five hundred rupees and that free of interest. These loans also need to be repaid only when it is convenient to the debtor. It would be inconvenient to have to repay a loan while the money was in the form of goods."

159 U Myaings eldest daughter has returned to the camp because the
369 woman who owns the cheroot rolling business has temporarily closed it
602 down and gone to Pantanaw with goods like onions, prawns and textiles. Since the girl is not sufficiently dexterous to find work elsewhere as

ates the incumbent, regularly undertakes the support of the *pôndyl*, and frequently of his sojourner *yahán* as well. The food, which is the best of its kind, is brought every morning by the daughters and young children of the supporter, or, in the case of joint support, by children of the leading families in turn. An ornamented vessel is used, having a tall finial to the cover (*ôt*). The supplies are received by the lay scholars or the novices, and by them served to the *yahán*. The principal meal is taken shortly before noon, for no food may be eaten after that hour till the following sunrise. Water may be drunk and betel chewed at any time. Tobacco-smoking is discountenanced, especially in Burma Proper, where the religious views are strictest. Burma furnishes the standard both for scholarship and practice, and trains most of the incumbents of the monasteries of Pegu. Scholars and novices may prepare food at the monastery from raw supplies. These the *yahán* may not even handle. Hired labour (*kappiza dayaka*) may be attached to the monastery by the supporter for the preparation of food and other services. In some cases lands have been dedicated for the maintenance of monasteries and temples. But the *yahán* have no concern with their administration. Supplies of raiment, chattels and food are dedicated to the use of the recluses when the distinction of their presence is solicited, especially at *shinlaung* fêtes and funerals. The annual provision of raiment (*kathin thingán*) is made between the months of *Thadingyut* and *Tasaungmôn*. The offerings of necessaries are supplemented by accessories of every sort —books and writing materials, mats,
